

ENVIRONMENTAL POLICY

Smalley Steel Ring Company is a proactive organization with respect to all environmental issues. We are committed to operating our business in an ecologically friendly manner with an emphasis on ensuring long-term value. We have established and are continuously improving upon a program that is geared to meet the following objectives:

- Comply with applicable environmental laws, regulations, and other requirements such as ensuring air, water and soil quality, minimizing noise emissions, and responsible stewardship of the land we operate on, being cognizant of local wildlife and bio-diverse environments. This includes ensuring our operations and those of our suppliers do not contribute to deforestation.
- Provide a safe and healthy working environment to our employees.
- Minimize the generation, and manage the disposal or recycling of, hazardous and non-hazardous chemicals and wastes or supplies at our facility to prevent or eliminate pollution.
- Measure and monitor carbon footprint (CFP) and greenhouse gas (GHG) and other air emissions. Research potential opportunities for decarbonization or GHG emissions reductions if possible and economically feasible.
- Ensure responsible use of resources (both renewable and non-renewable), and chemicals, in the design of our products, manufacturing processes and in the operation of our facility where possible and economically feasible.
- Drive initiatives focused on reduction, re-use, or recycling of scrap or wastes where possible. Also research ways to improve energy use and seek opportunities to use renewable energy if possible.
